

Notebook layout example

The three PDF files use this notebook with the default nbconvert layout, left prompts, and prompts above the code.

Markdown

Text supports **bold**, *italic*, and `inline code`.

- First item
 - Nested item
- Second item

A short quotation uses the template's block quote style.

Code and output

The cells below use Python's standard library.

In [1]:

```
from statistics import mean

values = [12, 15, 18, 21]
print(f"Mean: {mean(values):.1f}")
[value ** 2 for value in values]
```

Mean: 16.5

Out [1]:

```
[144, 225, 324, 441]
```

In [2]:

```
def describe(values):
    return {"min": min(values), "max": max(values), "count": len(values)}

describe(values)
```

Out [2]:

```
{'min': 12, 'max': 21, 'count': 4}
```

Mathematics and table

Inline mathematics: $a^2 + b^2 = c^2$.

$$\bar{x} = \frac{1}{n} \sum_{i=1}^n x_i$$

Item	Value
Minimum	12
Maximum	21
Mean	16.5

Long lines

Long code and output wrap within the page.

In [3]:

```
description = "This long line demonstrates how the template wraps code and saved output,
↳while keeping the original notebook source unchanged."
print(description)
```

This long line demonstrates how the template wraps code and saved output while keeping the original notebook source unchanged.
